React - Component Fundamentals

Q1: Create function based react components as follows -

Component Name	Returns
Yellow	"I am yellow"
Green	"I am green"
Blue	"I am blue"
Red	"I am red"

Call all the components in **App.js** and screenshot the output.

Q2: Create function based react components as follows -

Component Name	Returns
Button	HTML button (Search syntax if you don't know how to create button in HTML)
SideBar	"I am sidebar"
NavBar	"I am navbar"
Header	"Hello guys!"
Dashboard	Call Header Component, Button Component

Call the dashboard component in **App.js** and screenshot the output.

Q3: Create function based react components as follows -

Component Name	Returns
A	Hello from A
B	Call A twice
C	Call B twice

Call the C component in **App.js** and screenshot the output.

Q4: Create function based react components as follows -

Component Name	Returns
C1	Hello from C1
C2	Hello from C2
C3	Call C1 and C2

Call the C3 component in **App.js** and screenshot the output.

Q5: Try to self-evaluate:
- What is component?
- What are the rules for creating component?
- How to import, export and use components in React?
